

# Clean Energy for a Clean Environment

Girl Scout of Massachusetts Lending Library

## The Wind Power Kit

This comprehensive wind power kit offers a fun way to learn about using wind as a source of energy. One project you could do would be to have the girls design wind turbine blades and test which shapes result in the most electrical output. The kit includes:

- 3 wind machines: a basic turbine, a yawing turbine, and a geared turbine.
- 1 water pump which can be wind powered
- 2 multi-testers to test electricity
- Curricular materials

If you would like to borrow this kit please contact:
